## eBIKE BATTERIES

January 2024

### All our eBike Batteries are SAFE! - they do not spontaneously combust!

We are NOT aware of any problems with quality eBatteries (such as Bosch), through our own experience & that of other dealers.

Bosch batteries, for example, have protection at individual cell level as well as the whole eBattery. If there is the slightest problem, they shut down as a safety feature!

Quality, faulty batteries (very rare) are never repaired – only replaced.  
The same applies to chargers.

The Press are not telling the whole story - the eBatteries that catch fire are the cheap Chinese ones usually with poor battery management systems & incorrect chargers!

Many of these are for **illegal** eBikes or eScooters.

We recommend that the battery removed each day, especially in cold weather,  
& stored / charged inside the house at room temperature.

This should prolong the life of the battery & give many years of use.

*Please call us to discuss anything to do with our eBatteries  
or eBikes.*
